Engineering and Technology
Rashtrasant Tukadoji Maharaj Nagpur University, Nagpur
Syllabus for B.E. (Fifth Semester) Aeronautical Engineering
Heat Transfer (BEAE-501T)
(Total Credits: 05)

Teaching Scheme	Examination Scheme
Lectures: 4 Hours/ Week	Theory
Tutorial: 1 Hours / Week	T (U): 80 Marks T (I): 20 Marks
	Duration of University Exam: 03 Hours

Unit – I   **7 Hours**
Introduction: Basic modes of heat transfer, conduction, convection and radiation, Laws of heat transfer and conservation of energy requirement.
Heat Conduction – One dimensional steady state heat conduction: Composite Medium – Critical thickness – Effect of variation of thermal Conductivity – Extended Surfaces – Unsteady state. Lumped System Analysis – Heat Transfer in Semi infinite and infinite solids – Use of Transient – Temperature charts– Biot Number,

Unit – II   **7 Hours**
Free Convection:
Free or natural convection, Grashof number, Rayleigh number, Horizontal and vertical plate. Empirical co-relations for cylinders and spheres. Heat transfer with phase change, pool boiling curve & regimes of pool boiling. Film & Drop wise condensation, laminar film condensation on vertical surface, film condensation on horizontal tubes, effect of super heated & non-condensable gasses on condensation heat transfer, Introduction to heat pipe.

Unit – III   **7 Hours**
Forced convection:
Physical significance of non-dimensional parameters. Flow of high moderate & low prandtl number, fluid over flat surface. Concept of velocity & thermal boundary layer thickness, local and average heat transfer coefficients. Empirical co-relations for external, internal flow, laminar & turbulent flow through conduits.

Unit – IV   **8 Hours**
Radiative Heat Transfer
Radiation, nature of thermal radiation, black body radiation, radiation intensity, laws of radiation– Kirchoffs, Planks, Weins displacement, Stefan Boltzmann & Lamberts Co-sine law. Emissivity, Absorbtivity, Transmissivity, Reflectivity, Radiosity, Emissive power, irradiation. Radiation network, radiation exchange between surfaces, idea of shape factor & reciprocity theorem, radiation between parallel plates, cylinder & spheres. Radiation shields, effect of radiation on temperature measurement.

Unit – V   **8 Hours**
HEAT EXCHANGERS
Heat Exchanger :- Classification, Overall heat transfer coefficient, fouling factor, LMTD method of heat exchange analysis for parallel, counter flow & cross flow arrangement. Effectiveness NTU method, heat exchanger analysis by NTU method, design aspects of heat exchangers. Introduction to compact heat exchanger. Introduction to mass transfer.

Unit – VI   **8 Hours**
HEAT TRANSFER PROBLEMS IN AEROSPACE ENGINEERING
High-Speed flow Heat Transfer, Heat Transfer problems in gas turbine combustion chambers – Rocket thrust chambers – Aerodynamic heating – Ablative heat transfer.

                                                                                Total No of periods: 45

Engineering and Technology
Rashtrasant Tukadoji Maharaj Nagpur University, Nagpur
Syllabus for B.E. (Sixth Semester) Aeronautical Engineering
Propulsion- II (BEAE-601T)
(Total Credits: 05)

Teaching Scheme
Lectures: 4 Hours/ Week
Tutorial: 1 Hours / Week

Examination Scheme
Theory
T (U): 80 Marks   T (I): 20 Marks
Duration of University Exam: 03 Hours

Unit-I: Ramjet Propulsion   **7 Hours**
Operating principle - Subcritical, critical and supercritical operation - Combustion in ramjet engine – Ramjet performance - Sample ramjet design calculations.

Unit-II: Scramjet and Hypersonic Propulsion   **7 Hours**
Introduction to scramjet - Preliminary concepts in supersonic combustion - Integral ram - rocket - Numerical problems, Hypersonic propulsion.

Unit-III FUNDAMENTALS OF ROCKET PROPULSION   **7 Hours**
Operating principle - Specific impulse of a rocket - internal ballistics - Rocket nozzle classification – Rocket performance considerations - Numerical problems.

Unit-IV SOLID PROPELLENTS   **8 Hours**
Solid propellant rockets - Selection criteria of solid propellants - Important hardware components of solid rockets - Propellant grain design considerations.

Unit-V LIQUID PROPELLANT   **8 Hours**
Selection of liquid propellants – Thrust control in liquid rockets - Cooling in liquid rockets - Limitations of hybrid rockets - Relative advantages of liquid rockets over solid rockets - Numerical problems.

Unit-VI ADVANCED PROPULSION TECHNIQUES   **8 Hours**
Electric rocket propulsion - Ion propulsion techniques - Nuclear rocket - Types -Solar sail - Preliminary Concepts in nozzle less propulsion.

Total No of periods: 45

Teaching Scheme
Lectures: 3 Hours/ Week
Tutorial: 1 Hours / Week

Examination Scheme
· Theory
T (U): 80 Marks   T (I): 20 Marks
Duration of University Exam: 03 Hours

Unit – I: Introduction to Thermodynamics   7 hours
Basic concepts of Thermodynamics, Closed & Open Systems, Forms of energy, Properties of system, State & Equilibrium, Processes & Cycles, Temperature & Zeroth Law of Thermodynamics. Introduction to First Law of Thermodynamics (Law of Conservation of Energy), Heat & Work, Mechanical forms of work, Non-Mechanical forms work (Electrical, Magnetic etc.) The Ideal Gas equation of state, Difference between Gas & Vapor, Compressibility factor, Internal energy & specific heats of gases, Universal Gas Constant.

Unit - II: First Law of Thermodynamics   8 hours
Closed Systems (Control mass system), Work done, Change in internal energy, Heat transferred during various thermodynamic processes, P-V diagrams. Open systems (Control volume systems), Thermodynamic analysis of control volumes, Conservation of energy principle, Flow work & enthalpy.

Unit - III: Second Law of Thermodynamics   10 hours
Introduction (Law of degradation of energy), Thermal energy reservoirs, Kelvin-Plank & Clausius statements, Heat engines, Refrigerator & Heat pump, Perpetual motion machines, Reversible & Irreversible processes, Carnot cycle, Thermodynamic temperature scale.
Entropy: - The Clausius inequality, Entropy, Principle of increase of entropy, Change in entropy for Closed & Steady flow open systems.
Second law analysis of engineering systems: - Availability, Reversible work, Irreversibility, Temperature-entropy diagram.

Unit – IV: Properties of Steam   7 hours
Critical state, Sensible heat, Latent heat, Super heat, Wet steam, Dryness fraction, Internal energy of steam, External work done during evaporation, T-S diagram, Mollier chart, Work & Heat transfer during various thermodynamics processes with steam as working fluid. Determination of dryness fraction using various calorimeters.

Unit – V: Air Standard Cycles   7 hours
Otto cycle, Diesel cycle, Stirling & Ericsson cycle, Brayton cycle, Vapour cycles :- Simple & Modified Rankine cycle with reheat & regeneration.

Unit - VI: Application   6 hours
Applications to i) Nozzles & Diffusers ii) Turbine & Compressors iii) Throttle Valves. (Simple systems like charging & discharging of tanks)

                                              Total No of Periods- 45 hours

Engineering and Technology
Rashtrasant Tukadoji Maharaj Nagpur University, Nagpur
Syllabus for B.E. (Fourth Semester) Aeronautical Engineering
Aerodynamics- I (BEAE-405T)
(Total Credits: 04)

Teaching Scheme	Examination Scheme
Lectures: 3 Hours/ Week	Theory
Tutorial: 1 Hours / Week	T (U): 80 Marks T (I): 20 Marks
	Duration of University Exam: 03 Hours

Unit-I: Introduction   **6 Hours**
To understand the behaviour of airflow over bodies with particular emphasis on airfoil sections in the incompressible flow regime.
CHARACTERISTICS PARAMETERS FOR AIRFOIL AND WING AERODYNAMICS.
Characterizations of Aerodynamic Forces and Moments, Airfoil Geometry Parameters, Wing Geometry Parameters, Aerodynamic Force and Moment Coefficients, Wings of Finite Spans

Unit-II: Two Dimensional Flows   **8 Hours**
Basic flows – Source, Sink, Free and Forced vortex, uniform parallel flow. Their combinations, Pressure and velocity distributions on bodies with and without circulation in ideal and real fluid flows. Kutta Joukowski's theorem.

Unit-III: Incompressible Flows Around Airfoils   **11 Hours**
General Comments, Circulation and the Generation of Lift, General Thin- Airfoil Theory, Thin, Flat-Plate Airfoil (Symmetric Airfoil).Thin, Cambered Airfoil, High-Lift Airfoil Sections, Multielement Airfoil Sections for Generating High Lift, High-Lift Military Airfoils.

Unit-IV: Dynamics of A Compressible Flow Field   **6 Hours**
Thermodynamic Concepts, Adiabatic Flow in a Variable Area Stream tube, Isentropic Flow in a Variable area stream tube, Characteristic equations and Prandtl- Meyer Flow, Shock Waves.

Unit-V: Compressible Flow   **6 Hours**
Stagnation properties, speed of sound wave. Mach number, one dimensional isentropic flow, Stagnation properties, isentropic flow through convergent - divergent nozzles. Normal shock.

Unit VI: Introduction To Boundary Layer Theory   **6 Hours**
Concepts of laminar and turbulent boundary layer. Momentum integral equation. Approximate methods for solution of boundary later for simple cases.

Total No of periods: 45

Engineering and Technology
Rashtrasant Tukadoji Maharaj Nagpur University, Nagpur
Syllabus for B.E. (Third Semester) Aeronautical Engineering
Fluid Mechanics and Machinery (BEAE-303T)
(Total Credits: 04)

Teaching Scheme	Examination Scheme
Lectures: 3 Hours/ Week	Theory
Tutorial: 1 Hours / Week	T (U): 80 Marks T (I): 20 Marks
	Duration of University Exam: 03 Hours

Unit – I: Introduction to Fluid Mechanics   **7 hours**
Properties of fluids, Newton's law of viscosity and its applications, Pascal's law, Basic equation of fluid statics, Fluid pressure & its measurement (Manometers & Bourdon's pressure gauge), Pressure variations in compressible & incompressible fluids.

Unit – II: Kinematics of Fluid Flow   **8 hours**
Types of flow, Stream line, Path line, Streak line, Stream tube, Continuity equation, One & Two dimensional flow, Velocity & Acceleration at a point, Potential lines, Flow net, Stream function, Velocity potential, Circulation, Vortex motion.
Dynamics of Fluid Flow: One dimensional method for flow analysis, Euler's equation of motion, Derivation of Bernoulli's equation for incompressible flow & its applications.

Unit – III: Viscous Flow   **7 hours**
Introduction to laminar and turbulent flow, Reynolds number and its significance, Mach number and its significance, Boundary layer concept, Wall shear and boundary layer thickness, Displacement thickness and Momentum thickness, Separation, Drag and Lift on immersed bodies. Flow of viscous fluids through parallel plates, Pipes, Kinetic energy correction factor.

Unit – VI: Principles & Classification of Hydraulic Machines   **8 hours**
Impulse Turbines :- Principle, Constructional features, Installation of Pelton turbine, Velocity diagram & analysis, Working proportions, Design parameters, Performance characteristics, Governing & selection criteria.

Unit - V: Reaction or Pressure turbine   **7 hours**
Principles of operation, Degree of reaction, Comparison over pelton turbine, Development of reaction turbines, Classification, Draft tubes, Cavitation in turbines. Francis turbine, Propeller turbine, Kaplan turbine: Types, Constructional features, Installations, Velocity diagram & analysis, Working proportions, Design parameters, Performance characteristics, Governing, Selection of hydraulic turbines

Unit - VI : Hydraulic Pumps   **8 hours**
Classification & Applications
Introduction to Centrifugal, axial & mixed flow Pumps, Self priming pumps.
Introduction to Reciprocating Piston / Plunger Pumps.
Rotary Displacement Pumps: - Introduction to gear pumps, Sliding vane pumps, Screw pumps.

Total No of periods: 45

Teaching Scheme	Examination Scheme
Lectures: 4 Hours/ Week	Theory
Tutorial: 1 Hours / Week	T (U): 80 Marks T (I): 20 Marks
	Duration of University Exam: 03 Hours

Unit- I Introduction and background   **6 hours**

Dimensional analysis, Buckingham Pi theorem-applications-similarity laws and models International Standard Atmosphere

Unit-II: FORCES AND MOMENTS ON THE AIRPLANE   **10 hours**

Forces and moments acting on a flight vehicle - Equation of motion of a rigid flight vehicle - Different types of drag - Drag polars of vehicles from low speed to high speeds - Variation of thrust, power and SFC with velocity and altitudes for air breathing engines and rockets - Power available and power required curves.

AIRCRAFT PERFORMANCE   **8 Hours**
Unit-III

Performance of airplane in level flight - Maximum speed in level flight - Conditions for minimum drag and power required - Range and endurance, - Climbing flight (Maximum rate of climb and steepest angle of climb,) Service and absolute ceiling

Unit –IV   **7 Hours**

Gliding flight (minimum rate of sink and shallowest angle of glide) Turning performance (Turning rate turn radius). Bank angle and load factor, take off and landing performance - Limitations of pull up and push over

STATIC LONGITUDINAL STABILITY
Unit-V   **7   Hours**

Degree of freedom of rigid bodies in space - Static and dynamic stability - Purpose of controls in airplanes -Inherently stable and marginal stable airplanes – Static, Longitudinal stability - Stick fixed stability - Basic equilibrium equation - Stability criterion

Unit-VI   **7 Hours**

Effects of fuselage and nacelle - Influence of CG location - Power effects - Stick fixed neutral point - Stick free stability-Hinge moment coefficient - Stick free neutral points-Symmetric maneuvers - Stick force gradients - Stick _ force per 'g' - Aerodynamic balancing. Determination of neutral points and maneuver points from flight test.

Tutorial: 1 Hours / Week

Examination Scheme
Theory
T (U): 80 Marks   T (I): 20 Marks
Duration of University Exam: 03 Hours

Unit- I   **7 Hours**
Importance of CFD to various engineering streams. Basic fluid dynamics equations – continuity, momentum and energy. Conservation law form and non-conservation law forms of the Governing Differential Equations, Lagrangian and Eulerian formulations.

Unit- II   **7 Hours**
Description and procedure used in Finite Difference, Finite Element and Finite Volume schemes for simple one dimensional conduction problems, Application to unsteady one-dimensional conduction problems.

Unit- III   **8 Hours**
Application of Finite Difference method to 1D & 2D steady and unsteady conduction problems. Central and backward difference schemes. Explicit & Implicit schemes, Crank-Nicholson scheme.

Unit- IV   **7 Hours**
Solution of linear algebraic equations - Direct solution methods and Iterative schemes. Boundary value and initial value problems and their solution procedure. Runge Kutta methods. Shooting methods.

Unit-V   **8 Hours**
Conduction and convection problems. Navier Stokes equations. Application to incompressible flow. Pressure correction scheme, staggered grid, SIMPLE and SIMPLER schemes.

Unit-VI   **8 Hours**
Finite Volume method for compressible flow. Schemes like Jameson, MacCormack. Acceleration devices. Grid independent studies. Grid Generation

                                                                               Total No of periods: 45

Lectures: 3 Hours/ Week
Tutorial: 1 Hours / Week

Examination Scheme
Theory
T (U): 80 Marks   T (I): 20 Marks
Duration of University Exam: 03 Hours

Unit - I   **8 hours**
Basic concept of mechanism , link , kinematic pairs , kinematic chain , mechanism , machine , simple & compound chain , Degree of freedom , estimation of degree of freedom of mechanism by Grubbler`s criterion and other methods. Harding`s notation , classification of four bar chain (class -I & class - II), inversion of four- bar- chain , Kutchbach theory of multiple drives , energy paths. Various types of mechanism such as Geneva wheel , Pawal and ratchet mechanism , Exact straight line mechanism , Approx. straight line mechanism , steering mechanism, Transport mechanism.

Unit - II   **7 hours**
Quantitative kinematic analysis of mechanism :- Displacement , Velocity , and Acceleration analysis of planner mechanism by graphical method as well as analytical method (complex number method / matrix method) , Coriolis component of acceleration , Instantaneous center method , Kennedy`s theorem.

Unit - III   **7 hours**
Concepts of cam mechanism , comparison of cam mechanism with linkages. Types of cams and followers and applications. Synthesis of cam for different types of follower motion like constant velocity , parabolic , SHM , cycloidal etc. Cam dynamics and jump-off phenomenon.

Unit – IV   **8 hours**
Static & Dynamic force analysis :- Free body diagram, condition of equilibrium. Analysis of all links of given linkages, cam, gear mechanism and their combinations without friction. Dynamic force analysis of planar linkages such as four bar chain & reciprocating mechanism by graphical method, virtual work method & analytical (complex number) method.

Unit - V   **8 hours**
Rigid body motion in space. Euler`s equation of motion, Gyroscope, angular velocity, angular acceleration, simple precession & gyroscopic couple. Gyroscopic effect on airplane. Ship, vehicles. Speed governors, centrifugal & inertia type, Watt, Portal, Proell, Hartnell governors, Operating characteristics of governors.

Unit – VI   **7 hours**
Static & Dynamic balancing in rotating machines. Balancing machines & field balancing by vector diagram. Balancing in reciprocating mechanism. Effect of partial balancing in locomotives, secondary balancing. Balancing of inline engine, V – engine, and radial engine.

Total No of periods: 45

Engineering and Technology
Rashtrasant Tukadoji Maharaj Nagpur University, Nagpur
Syllabus for B.E. (Fourth Semester) Aeronautical Engineering
Aircraft Materials (BEAE-403T)
(Total Credits: 04)

Teaching Scheme	Examination Scheme
Lectures: 4 Hours/ Week	Theory
	T (U): 80 Marks T (I): 20 Marks
	Duration of University Exam: 03 Hours

Unit – I: Introduction to aerospace materials: **10 hours**
Classification, composition, properties, heat treatment & application of plain carbon steels, alloy steels. Stainless steels. Classification, composition, properties, heat treatment & application of aluminium and its alloys. Titanium alloys, Special alloys for high temperature.

Unit – II: Introduction to composite materials.   **8 hours**
Definition – Classification of Composite materials based on structure – based on matrix. Advantages of composites – application of composites – functional requirements of reinforcement and matrix.
FIBERS: Preparation, properties and applications of glass fibers, carbon fibers, Kevlar fibers and metal fibers – properties and applications of whiskers, particle reinforcements.

Unit – III: Manufacturing Of Advanced Composites   **7 hours**
Polymer matrix composites: Preparation of Moulding compounds and prepregs – hand layup method – Autoclave method – Filament winding method – Compression moulding – Reaction injection moulding. Manufacturing of Metal Matrix Composites: Casting – Solid State diffusion technique, Cladding – Hot isostatic pressing.

Unit – IV: Creep   **5 hours**
Factors influencing functional life of components at elevated temperatures, definition of creep curve, various stages of creep, metallurgical factors influencing various stages, effect of stress, temperature and strain rate.
Design for Creep Resistance
Design of transient creep time, hardening, strain hardening, expressions of rupture life of creep, ductile and brittle materials, Monk man-Grant relationship.

Unit – V: Fracture   **8 hours**
Various types of fracture, brittle to ductile from low temperature to high temperature, cleavage fracture, ductile fracture due to micro void coalescence-diffusion controlled void growth; fracture maps for different alloys and oxides, Fatigue of aircraft materials

Oxidation and Hot Corrosion
Oxidation, Pilling, Bedworth ratio, kinetic laws of oxidation- defect structure and control of oxidation by alloy additions, hot gas corrosion deposit, modified hot gas corrosion, fluxing mechanisms, effect of alloying elements on hot corrosion, interaction of hot corrosion and creep, methods of combat hot corrosion.

Unit –VI: Super alloys and Other Materials   **6 hours**

Engineering and Technology
Rashtrasant Tukadoji Maharaj Nagpur University, Nagpur
Syllabus for B.E. (Fourth Semester) Aeronautical Engineering
Aircraft Structure- I (BEAE-404P)
(Total Credits: 01)

Teaching Scheme	Examination Scheme
Practical: 2 Hours/ Week	Practical
	T (U): 25 Marks T (I): 25 Marks

List of Experiments in Aircraft Structure- I (Minimum any Ten Experiments)

1. Study of strain measuring instruments mechanical, electrical types.
2. Tension test on metals.
3. Hardness test on metals.
4. Torsion test on metals.
5. Impact test metals.
6. Transverse test on beams including deflections.
7. Notch Bar Test for toughness of metals.
8. Measurement of static strains using electrical resistance gauges.
9. Verification of S.T. in beams.
10. Deflection of springs.
11. Aircraft structure material: Absorption Test, Dimension Test, Crushing strength

Syllabus for B.E. (Seventh Semester) Aeronautical Engineering
Design of Machine Elements (BEAE-702T)
(Total Credits: 05)

Teaching Scheme
Lectures: 4 Hours/ Week
Tutorial: 1 Hours / Week

Examination Scheme
Theory
T (U): 80 Marks   T (I): 20 Marks
Duration of University Exam: 03 Hours

Unit I: Fundamentals of Design   **4 Hours**
Design Process – Computer aided design – Optimum design – Mechanical properties of materials – Types of loads – Stresses –Static, varying, thermal, impact and residue – Factor of safety – Stress concentration factors –Preferred numbers.

Unit II: Design of Basic Machine Elements and Joints   **10 Hours**
Design of shafts, keys, couplings. Design of riveted and welded joints, Bolted Joints & Applications to Aircraft

Unit – III: Design of Springs and Bearing   **8 Hours**
Design of Helical compression & Tension springs for static & fatigue loading. Design of design of journal bearings for radial and thrust loads, selection of ball & roller bearings for radial and thrust loads

Unit IV: Design of Gears   **10 Hours**
Design of gears – Spur and Helical gears – Design of multistage speed reducers.

Unit V: Design of Drives   **5 Hours**
Belt Drives - Flat belt drive :- Types of belts & belt material, analysis of belt tension, condition for transmitting maximum power, design of flat belt, flat belt pulley. V Belt drive: - Types of V-belt, analysis of V-belt tension, design of V-belt pulley.

Unit VI: Design Of Engine Parts   **8 Hours**
Design of Cylinder – piston – connecting rod – crank shaft
Flywheel - Coefficient of fluctuation of energy and coefficient of fluctuation of speed, energy store in flywheel, stresses in flywheel, design of flywheel.

                                                        Total No of periods: 45

1. Hand Book of Machine Design by Shigley & Mischke.

Engineering and Technology
Rashtrasant Tukadoji Maharaj Nagpur University, Nagpur
Syllabus for B.E. (Eighth Semester) Aeronautical Engineering
Vibration and Aero- elasticity (BEAE-802T)
(Total Credits: 05)

Teaching Scheme
Lectures: 4 Hours/ Week
Tutorial: 1 Hours / Week

Examination Scheme
Theory
T (U): 80 Marks   T (I): 20 Marks
Duration of University Exam: 03 Hours

Unit I: Basic Notions   **6 Hours**
Simple harmonic motion – Terminologies – Newton's Law – D' Alembert's principle – Energy Methods

Unit II: Single Degree of Freedom Systems   **9 Hours**
Free vibrations – Damped vibrations – Forced Vibrations, with and without damping – support excitation – Vibration measuring instruments. Response to periodic and non-periodic excitations – Duhamel's Integral.

Unit III: Multi Degrees of Freedom Systems   **7 Hours**
Two degrees of freedom systems – Static and Dynamic couplings - vibration absorber - Principal co-ordinates, Principal modes and orthogonality condition – Eigen value problems.

Unit IV   **6 Hours**
Generalized Co-ordinates - Hamilton's principle- Lagrange's equation and application

Unit V: Continuous Systems   **10 Hours**
Vibration of strings - Longitudinal, Lateral and Torsional vibrations of beams - forced response of beams

Unit VI: Elements of Aero elasticity   **7 Hours**
Concepts – Coupling – Aero elastic instabilities – Basic ideas on wing divergence, loss and reversal of aileron control, Flutter.

                                                        Total No of periods: 45

Theory
T (U): 80 Marks   T (I): 20 Marks
Duration of University Exam: 03 Hours

Unit – I   **7 Hours**
Mathematical Modeling of Physical System and Concept of Transfer Function system Representation through Block Diagram and Signal Flow Graph. Transfer friction through Block Diagram Simplification and Mason's Gain Formula.

Unit – II   **6 Hours**
System Models: Concept of a system, system environment, stochastic activities continuous & discrete system, system modeling, type of models static physical models, dynamic physical models, static & dynamic mathematical models, principles used in modeling.

Unit – III   **7 Hours**
System Studies: Subsystems, a corporate model, types of system study, system analysis design & postulation.

Unit – IV   **8 Hours**
Control System Components such as hydraulic actuators, Servomechanism D.C. and liquid level control, Automobile Power Steering Control, Speed Control, Position control of Robotic Manipulator Etc.

Unit –V   **9 Hours**
Use of computer based simulation package such as Mat lab simulink.

Unit – VI   **8 Hours**
Typical Navigational systems- - Integrated Avionics system, Avionic sub system

                                                           Total No of periods: 45

OBJECTIVE
To enhance the knowledge in continuation of the design project given in project–I. To introduce and develop the basic concept of aircraft design. Each student is assigned with the design of an Airplane for given preliminary specifications. The following are the assignments to be carried out:

Task list for the project
1. Comparative configuration study of similar airplanes
2. Selection of main parameters for the design
3. Preliminary weight estimations
4. Power plant selection, Aerofoil selection, Wing tail and control surfaces
5. Preparation of layouts of balance diagram and three view drawings
6. Estimation of various Drag components.
7. Performance calculations and stability estimates
8. V-n diagram for the design study
9. Load estimation of wings
10. Load estimation of fuselage.
11. Balancing and Maneuvering loads on tail plane, Aileron and Rudder loads.
12. Preliminary structural design of wing/fuselage
13. Preparation of a detailed design report

Syllabus for B.E. (Eighth Semester) Aeronautical Engineering
Air Transportation (BEAE-801T)
(Total Credits: 05)

Teaching Scheme
Lectures: 4 Hours/ Week
Tutorial: 1 Hours / Week

Examination Scheme
Theory
T (U): 80 Marks   T (I): 20 Marks
Duration of University Exam: 03 Hours

Unit I: Introduction   **8 Hours**
Development of air transportation, comparison with other modes of transport - Role of IATA, ICAO – The general aviation industry airline - Factors affecting general aviation, use of aircraft, airport: airline management and organisation - levels of management, functions of management, Principles of organisation planning the organisation - chart, staff departments & line departments.

Unit II: Airline Economics   **7 Hours**
Forecasting - Fleet size, Fleet planning, the aircraft selection process, operating cost, passenger capacity, load factor etc. - Passenger fare and tariffs - Influence of geographical, economic & political factors on routes and route selection.

Unit III: Fleet Planning   **8 Hours**
The aircraft selection process - Fleet commonality, factors affecting choice of fleet, route selection and Capitol acquisition - Valuation & Depreciation - Budgeting, Cost planning - Aircrew evaluation - Route analysis - Aircraft evaluation.

Unit IV Principles of Airlines Scheduling   **7 Hours**
Equipment maintenance, Flight operations and crew scheduling, Ground operations and facility limitations equipments and types of schedule - hub & spoke scheduling, advantages / disadvantages & preparing flight plans- Aircraft scheduling in line with aircraft maintenance practices.

Unit IV: Aircraft Reliability   **8 Hours**
Aircraft reliability - The maintenance schedule & its determinations - Condition monitoring maintenance - Extended range operations (EROPS) & ETOPS - Ageing aircraft maintenance production.

Unit VI: Technology in Aircraft Maintenance   **7 Hours**
Airlines scheduling (with reference to engineering) - Product support and spares - Maintenance sharing - Equipments and tools for aircraft maintenance - Aircraft weight control - Budgetary control. On board maintenance systems - Engine monitoring - Turbine engine oil maintenance - Turbine engine vibration monitoring in aircraft - Life usage monitoring - Current capabilities of NDT - Helicopter maintenance -Future of aircraft maintenance.

Tutorial: 1 Hours / Week	T (U): 80 Marks T (I): 20 Marks
	Duration of University Exam: 03 Hours

Unit I   **8 Hours**
Aircraft ground handling and support equipment,Mooring, jacking, levelling and towing operations - Preparation - Equipment and precautions - Engine starting procedures - Piston engine, turboprops and turbojets - Engine fire extinguishing - Ground power units.

Unit II   **6 Hours**
Ground servicing various sub systems, Air conditioning and pressurisation - Oxygen and oil systems - Ground units and their maintenance.

Unit III   **7 Hours**
Shop safety - Environmental cleanliness - Precautions. Hand tools - Precision instruments – Special tools and equipments in an airplane maintenance shop – Identification terminology

Unit IV   **9 Hours**
Inspection Process - Purpose - Types - Inspection intervals - Techniques - Checklist - Special inspection - Publications, bulletins, various manuals - FAR Air worthiness directives - Type certificate Data Sheets - ATA specifications

Unit V   **9 Hours**
Specification and correct use of various aircraft hardware (i.e. nuts, bolts, rivets, screws, etc.) - American and British systems of specifications - Threads, gears, bearings, etc. - Drills, tapes &reamers - identification of all types of fluid line fittings.

Unit VI   **6 Hours**
Plumbing connectors Cables Swaging procedures, tests, Advantages of swaging over splicing.

Unit-I: Sheet Metal Repair And Maintenance   **8 Hours**

Inspection of damage - Classification - Repair or replacement - Sheet metal inspection - N.D.T. Testing – Riveted repair design, Damage investigation - reverse technology
WELDING IN AIRCRAFT STRUCTURAL COMPONENTS:
Equipments used in welding shop and their maintenance - Ensuring quality welds - Welding jigs and fixtures - Soldering and brazing.

Unit- II: Plastics and Composites in Aircraft   **7 hours**

PLASTICS IN AIRCRAFT: Review of types of plastics used in airplanes - Maintenance and repair of plastic components - Repair of cracks, holes etc., and various repairs schemes - Scopes. ADVANCED COMPOSITES IN AIRCRAFT: Inspection - Repair of composite components – Special precautions - Autoclaves

Unit- III: Aircraft Jacking, Assembly and Rigging   **7 Hours**

Airplane jacking and weighing and C.G. Location, Balancing of control surfaces - Inspection maintenance, Helicopter flight controls. Tracking and balancing of main rotor.

Unit- IV Review Of Hydraulic And Pneumatic System   **8 Hours**

Trouble shooting and maintenance practices - Service and inspection - Inspection and maintenance of landing gear systems. - Inspection and maintenance of air-conditioning and pressurisation system, water and waste system.

Unit- V   **8 Hours**

Installation and maintenance of Instruments - handling - Testing – Inspection, Inspection and maintenance of auxiliary systems - Fire protection systems - Ice protection system - Rain removal system -Position and warning system - Auxiliary Power Units (APUs).

Unit – VI: Safety Practices   **7 Hours**

Hazardous materials storage and handling, Aircraft furnishing practices – Equipments, Trouble shooting
